CSC4005 High Performance Computing (2018/19)

HPC Programming Project Presentation

Contact: Dr Blesson Varghese
b.varghese@qub.ac.uk

Deadline for submission - Friday, December 07, 23:59

Date and Venue

Monday, 10 December 2018 in Room 0G.018, Computer Science Building. Please note: swipe card access is required to enter the building after 5 pm.

Presentation Slots

If you haven't already signed up the sheet for selecting a presentation slot, then please make sure you do this on the Google spreadsheet (link was sent via email) before 05 December.

Guidelines

You presentation is to ONLY have 5 slides and is to last for no more than 8 minutes. Violating this will incur penalties.

It is expected that the content will be presented at a conceptual level and not at the level of specific variables etc.

The following is the organisation of your slides:

- 1 slide: The first slide should address what you are presenting, and also include a bespoke title.

- 3 slides: The next three slides should present and justify the optimisation strategies you have used in your OpenMP and MPI programs for the final project.

- 1 slide: The final slide will consider what additional optimisations could have been done. If there were reasons why they couldn't be implemented you will present them as well.

As a general principle, please do not overcrowd your slides. I will be looking for clarity and quality of content. Use of jargon and poorly edited slides will not help. There is no recommended template, but you may use one that will help you present in a professional setting.

Submission

Your presentation must be submitted in .ppt, .pptx or .pdf format.

Note: Please do NOT use any other format for submission. Additionally, only slides submitted via QOL before the submission deadline will be used for presentation.

All the best!
